

Merhawi Ferede

Infrastructure Engineer · Java / AI Developer

Columbus, Ohio | merafe@gmail.com | (443) 683-9974 | linkedin.com/in/merhawi-ferede-dev

SUMMARY

I work both sides of the stack. At AWS and Google data centers, I troubleshoot Linux systems, routers, and switches inside AI infrastructure environments running NVIDIA GB200/GB300 systems — real hardware, real tickets, real uptime. As a Java developer, I build backend and full-stack applications with Spring Boot, REST APIs, and PostgreSQL, and I've started wiring LLMs and generative AI directly into that software — not as a chat widget bolted on the side, but as logic that actually drives what the application does. Five-plus years keeping systems reliable, nearly two building on top of them.

SKILLS

Languages	Java, SQL, JavaScript, HTML, CSS
Backend	Spring Boot, Spring MVC, REST APIs, JDBC, Maven, JUnit
Frontend	React.js, Angular, Vue.js
Cloud / DevOps	AWS, GCP, Cloud Run, Cloud Functions, GitHub Actions, CI/CD
Systems	Linux, Git, PostgreSQL, Bash, Ticketing Systems
Infrastructure	Networking, Routers, Switches, GB200/GB300, LLM / AI Systems

EXPERIENCE

Junior Software Developer — Reality AI Lab (Remote)

2025 – Present

- Built scalable REST APIs using Java and Spring Boot
- Developed frontend components with React.js and Angular
- Implemented authentication, authorization, and PostgreSQL integration
- Deployed cloud-native apps on GCP Cloud Run and Cloud Functions
- Automated CI/CD pipelines with GitHub Actions
- Integrated AI/LLM-powered chatbot features into enterprise applications

Data Center Operations & Networking — AWS

2024 – Present

- Troubleshoot Linux systems, routers, switches, and optical infrastructure
- Performed system diagnostics, monitoring, and log analysis
- Supported incident resolution and infrastructure reliability
- Supported AI infrastructure environments (NVIDIA GB200/GB300 systems)

Java Developer Trainee — Revature

2024 – 2025

- Developed full-stack applications using Java, Spring Boot, REST APIs, PostgreSQL
- Built and tested APIs with JUnit and Postman
- Integrated Vue.js frontend with backend services
- Applied OOP principles, design patterns, and clean code practices

PROJECTS

Ticket-to-Deploy Automation Script

[Bash](#) · [Linux CLI](#) · [Ticketing Systems](#) · [Automation](#)

- Replaced a manual CLI/Linux deployment process (~15 min/ticket) with a single terminal command
- Adopted by 30+ technicians on the team as the standard way tickets get run
- Cuts execution time and human error, keeping deployments consistent across the team

AI-Powered Console ATM

[Java](#) · [OpenAI API](#) · [Jackson](#) · [java-dotenv](#) · [Weka](#) · [DL4J](#)

- Natural-language input via LLM API interprets and routes user commands to a Java execution engine
- ML model screens every transaction for fraud risk in real time
- API keys kept in environment variables; AI logic and banking logic fully separated

Banking & Money Transfer REST API

[Java](#) · [Spring Boot](#) · [REST APIs](#) · [PostgreSQL](#) · [JWT](#)

- Secure banking backend with JWT authentication and role-based access control
- LLM-based chatbot integrated for customer support

Digital Banking Reservation Platform

[Java](#) · [Spring Boot](#) · [REST APIs](#)

- Backend scheduling system for banking service appointments
- REST APIs for booking, customer management, and workflow automation

Banking Operations System (CLI)

[Java](#) · [OOP](#) · [File I/O](#)

- Java CLI application built with OOP and file handling to manage banking records and transactions

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate
- REST API Development with Spring Boot
- Spring Framework for Java Development
- Java 8 Programming Fundamentals
- Object-Oriented Programming in Java
- Generative AI for Java and Spring Development
